

Amendments To Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A method for providing ~~on-line~~ processed financial account data to users, comprising:

receiving an ~~on-line~~ request from a user for account data, wherein the request includes data selection criteria;

formatting the data selection criteria in accordance with format requirements of a plurality of disparate sources;

retrieving ~~data on-line~~ financial account data from the plurality of disparate ~~multiple~~ sources ~~to obtain the account data;~~

retrieving transaction data from at least one of a: Customer Reservations System (CRS) and an air carrier;

analyzing metadata associated with elements of the financial account data and elements of the transaction data to determine relationships between the elements;

positioning each of the elements according to the relationships;

conditioning the elements ~~account data~~ to create the processed financial account data for transmission to the user; and

sending the processed financial account data ~~on-line~~ to the user.

2. (currently amended) The method of claim 1, wherein:

~~the retrieving step includes retrieving the data from the multiple sources in disparate formats; and~~

the conditioning step includes converting the elements ~~data~~ from the disparate ~~formats~~ sources into a single format.

3. (currently amended) The method of claim 1, further including formatting the processed financial account data into a report.

4. (currently amended) The method of claim 1, further including:
receiving from the user a query associated with the request;
processing the ~~retrieved~~ financial account data and the transaction data to extract the account data satisfying parameters of the query; and
sending the extracted account data ~~on-line~~ to the user.
5. (currently amended) The method of claim 4, further including formatting the extracted account data into a report.
6. (currently amended) A method for a user to obtain ~~on-line~~ processed financial account data, comprising:
submitting ~~an on-line~~ a request by the user for account data, wherein the request includes data selection criteria and, wherein said request causes a host to: ;
format the data selection criteria in accordance with format requirements of a plurality of disparate sources;
retrieve having financial account data ~~retrieved on-line~~ from multiple the plurality of sources to obtain the account data;
retrieve transaction data from at least one of a: Customer Reservations System (CRS) and an air carrier;
analyze metadata associated with elements of the financial account data and the transaction data to determine relationships between the elements;
position each of the elements according to the relationships;
having condition the account data the elements to create the processed account data conditioned ~~for transmission to the user;~~ and
receiving the ~~requested~~ processed account data ~~on-line~~.
7. (currently amended) The method of claim 6, wherein:
~~the retrieving step includes having the data retrieved from the multiple sources in disparate formats; and~~

the ~~conditioning condition~~ step includes ~~having the data converted~~ converting the financial account data and the transaction data from the disparate sources formats into a single format.

8. (currently amended) The method of claim 6, further including receiving the processed account data within a formatted ~~into~~ a report.

9. (currently amended) The method of claim 6, further including:
submitting from the user a query associated with the request, wherein said query causes said host to process; having the retrieved financial account data and transaction data processed to extract ~~the~~ account data-satisfying parameters of the query; and
receiving the extracted account data ~~on-line~~.

10. (currently amended) The method of claim 9, further including receiving the extracted account data within a formatted ~~into~~ a report.

11. (currently amended) A system for providing on-line financial account data to users, comprising:

a module for receiving ~~an on-line~~ a request from a user for account data, wherein the request includes data selection criteria;

a module for formatting the data selection criteria in accordance with format requirements of a plurality of disparate sources;

a module for retrieving ~~data on-line~~ the financial account data from the plurality of disparate multiple sources to obtain the account data;

a module for retrieving transaction data from at least one of a: Customer Reservations System (CRS) and an air carrier;

a module for analyzing metadata associated with a plurality of elements of the financial account data and elements of the transaction data to determine relationships between the plurality of elements;

a module for positioning each of the elements according to the relationships;

a module for conditioning the ~~account data~~ elements to create the processed financial

account data for transmission to the user; and

a module for sending the processes financial account data ~~on-line~~ to the user.

12. (currently amended) A system for a user to obtain ~~on-line~~ processed financial account data, comprising:

a module for submitting ~~an on-line~~ a request by the user for account data;

a module for having data retrieved ~~on-line~~ from multiple sources to obtain the account data;

a module for having the account data conditioned for transmission to the user; and

a module for receiving the requested account data on-line.

a module for submitting ~~an on-line~~ a request by the user for account data, wherein the request includes data selection criteria and, wherein said request causes a host to:

format the data selection criteria in accordance with format requirements of a plurality of disparate sources;

retrieve having the financial account data ~~retrieved on-line~~ from multiple the plurality of sources to obtain the account data;

retrieve transaction data from at least one of a: Customer Reservations System (CRS) and an air carrier;

analyze metadata associated with elements of the financial account data and elements of the transaction data to determine relationships between the elements;

position each of the elements according to the relationships;

having condition the account data elements to create the processed account data conditioned for transmission to the user; and
receiving the requested processed account data ~~on-line~~.
